+998 (33) 797-77-67 | Tashkent, Uzbekistan | sakhib@orzklv.uz | github.com/orzklv | orzklv.uz

WORK EXPERIENCE

Community Lead & Maintainer

Apr 2025 — Present

Floss Uzbekistan

Tashkent, Uzbekistan

- Founded the organization and its team structure, principles.
- Created standartization process for communities to follow.
- Authored 3 standards implemented during standartization process.
- Convinced more than 9 community owners to join a unified network which exceeds more than 7557+ members overall.
- Co-authored & contributed to more than 50+ projects hosted, provided and sponsored by Floss Uzbekistan.

Head of Open Source Department

Apr 2025 — Present

Open Source at Uzinfocom

Tashkent, Uzbekistan

- Designed principles, policy and structure of the team.
- Developed an operating system on top of NixOS Linux distribution:
 - Implemented software store center for easier software download.
 - Implemented nix-conf editor for easier nix configuration viewing & modification.
 - Implemented module manager for easier system tweaking.
 - Implemented superset package manager on top of nix for xlinux named xin.
 - Developed various research oriented projects for NixOS including registry indexing and graph monitoring.
 - Managed implementation of GTK app on Rust namely **e-imzo-manager**.
- Contributed to nixpkgs by adding **e-imzo** package and its modules to the package registry.
- Reshaped Xlinux community's vision on Linux ecosystem by renovating whole infrastructure and goals.
- Maintained fork of nixpkgs for Xlinux operating system.
- Maintained fork of nix-darwin: nix modules for darwin via xlinux-org forked nixpkgs.
- Wrote nix abstractions and configurations for matrix, a messenger infrastructure deployed on bare-metal NixOS.
- Maintained a messenger built on top of Matrix protocol and its Element derived fork components for governmental use:
 - iOS mobile application for the messenger.
 - Audio/Video calls (livekit)
 - Authentication service synapse (matrix-authentication-service).
 - Synapse matrix homeserver (matrix-synapse).

Embedded Software Engineer

Sep 2024 — Apr 2025

MyID & AI at Uzinfocom

Tashkent, Uzbekistan

- Participated in deployment of PalmID system throughout whole **Uzbekistan Subway Line**.
- Developed Encryption protection enclave for deployed software in the system.
- Developed operating system setups & instances for PalmID deployment.
- Participated in hardware side development of PalmID infrastructure.
- Conducted research on NixOS on Raspberry Pi 5 for declarative deployments & duplication.
- Developed various PoC driver components for the PalmID system.

Low Level & Rust Software Engineer

Jul 2023 — Sep 2024

ccTLD at Uzinfocom

Tashkent, Uzbekistan

- Co-authored system manager software written on Qt5.
- Co-authored onvif protocol implementation.
- Co-authored unified system server implementation.
- Reverse engineered deployed complex hardware systems.
- Researched NixOS and its capabilities for low-level systems use.

Development Team Lead

Oct 2022 — Jun 2023

ccTLD at Uzinfocom

Tashkent, Uzbekistan

- Participated in acquisition of Xlinux open source project under the organization.
- Participated in deployment of NS8 on top of Xlinux operating system [[official news](#)].
- Implemented the RDAP protocol on Rust [[official news](#)].

- Implemented many network interface drivers for .uz TLD infrastructure.
- Implemented VCard abstractions on Rust and published as library for public use.
- Co-authored uzbek linguistics library & platforms written on Rust namely **Korrektor**.
- Participated in implementation of various social projects mostly being development of complex telegram survey bots.

Software Engineer

Apr 2022 — Oct 2022

ccTLD at Uzinfocom

Tashkent, Uzbekistan

- Implemented an MVP concept of RDAP protocol for the uzbek internet on TypeScript/Deno.
- Testing / Benchmarking other implementations using Apache JMeter and many more.
- Implementing test suites for domain name oriented softwares to test compatibility with the infrastructure.

Lead Open Source Engineer

Oct 2019 — Mar 2022

GitHub, Open Source

Remote

- Took part in maintainership of a programming language development.
- Took part in maintainership of a Linux community and its distribution hosted in Uzbekistan.
- Became LLVM committer and contributed to the project by sending platform specific bug-fixes.
- Contributed to other open source projects like `nextjs` by `zeit`, `scoop`, `deno` by sending bug fixes.

Additional: Later, in 2022 the project `Xinux` got acquired by Uzinfocom by ending its concept phase.

Freelance Full Stack Developer

Feb 2017 — Sep 2019

Freelancer.com

Remote

- Closed more than 180 contracts & offers with marching 4.8 star review.
- Participated in huge contract based team works by huge companies across the globe.
- Completed various categories of submissions including web, bug-hunting, sometimes mobile development and devops.

Intern Developer & Staff

Dec 2014 — May 2016

INHA University in Tashkent

Tashkent, Uzbekistan

- Conducted researches on assembly optimizations with professors at the university.
- Built variety categories of projects using C/C++ to support growing infrastructures.

NOTABLE SIDE PROJECTS

Maintainer, Sark (Sokhibjon's ARM RaspberryPi Kernel) (<https://sark.kibertexnik.uz/kernel/>) Dec 2024 — Present

- While attempting to reduce size of Linux kernel for embedded deployment, I developed kernel on Rust entirely from scratch for Raspberry Pi model 3, 4, 5.
 - Implemented safe globals and synchronization
 - Implemented drivers:
 - GPIO
 - UART
 - Implemented BSPs, timestamps and console.

Maintainer, Osmon Programming Language (<https://github.com/osmon-lang>)

Apr 2021 — May 2023

- Maintained the project which had its own community consisting more than 100+ users in its peak.
- Implemented programming language frontend using uzbek language on Rust for further integration with language's hybrid backend infrastructure.
- Implemented registry based virtual machine on Rust for integration with interpreter.
- Implemented libgccjit bindings for the rust for further AOT implementation.
- Implemented fundamental standard library for the language to be able to write something on it (with cli example).

Maintainer, Xinux Community & Linux Distro (Before Acquisition) (<https://github.com/xinux-org>) Dec 2020 — Jun 2022

- Founded and shaped a community of Linux enthusiasts which become the only community to contribute to global Linux related projects & communities.
- Taught early generation of members to fundamentals of Linux and its internals using Arch Linux.
- Developed various community assistants (e.g telegram bots) to help newcomers with learning materials and resources.
- Developed early version of Xinux, an Arch Linux based Linux distribution, DX oriented operating system.
- Initiated localization project aimed to translate Linux ecosystem to Uzbek language.
- Developed various components and utilities for easier adoption:
 - greeter on top of lightdm-webkit2

- calamares installer fork
- aptpac fork
- mirror-picker for mirror automation
- package manager on top of pacman
- sdk on typescript for arch linux package registry

EXTRACURRICULAR ACTIVITIES

Uzinfocom Open Source

Jan 2021 — Present

- Convinced Adminsitration to do open source development (before the official department was established within the company).
- Developed and participated in various kinds of experiments including:
 - Developed a service “Maestro” for staffs use to make LDAP logging and network management easier.
 - Co-authored uzbek linguistic libraries and platforms written on Rust namely “Korrektor”.
 - Co-authored onvif protocol implementation on PHP.
 - Participated in development of microcomputer using Atmega328 that can let users write and execute assembly instructions.
 - Developed projects within the interest of other departments including websites and tools.
- Open Sourced the early implementation of RDAP protocol written on TypeScript/Deno for the uzbek internet.

Uzinfocom RnD

Jul 2023 — Sep 2024

- Researched technologies & tech stacks within the interest of the company.
- Supported and maintained blockchain infrastructure built on top of Ethereum.
- Engineered and supported devops infrastructure (esxi, later proxmox stack) for the projects maintained by the team.

Mad Maids

Feb 2020 — Aug 2023

- Founded and Led the club within the Westminster Internation University in Tashkent which contained top ranking developers studying at the university.
- Organized / Hosted various kind of technical events for hackers studying at the university.
- Renovated university’s existing infrastructure including LMS and Student Record System using modern technology which led to 50% of the overall university’s internet traffic.
- Participated in university’s module programme administration & governance.
- Funded & Sponsored other clubs’ activities.
- Developed various categories of freemium & open source software for students use which had more than 800+ users (1/3 of overall students styuding at the university).

Khakimov's Family

Jan 2017 — Present

- Managing infrastructure and datacenter namely [Kolyma](#) founded and owned by Khakimovs Family.
- DevOps and created software for the infrastructure support including:
 - NAT Traversal.
 - Proxy for the web.
 - Custom Protocol on top of Layer 4 for internet data & traffic exchange named “Kolyma’s Jail Protocol”.
- Hardware provision and monitoring for further locally hosted projects.

EDUCATION

University of Westminster UK

Sep 2019 — Mar 2024

Bachelor's of Science, Business Information System

Tashkent, Uzbekistan

- Grade: Upper Second class honours
- Relevant Coursework: Data Structures, Program Development, Application of Business in IT, Statistics: Core, Computer Science Fundamentals, Systems Engineering.
- Paperwork: Programming language compiler engineering & hybrid compilation.

WIUT Graduation, WIUT UK (<https://veri.westminster.ac.uk/?reference=78393204-01-A68N>)

May 2024

Academic Lyceum of Wesminster International University in Tashkent

Sep 2017 — May 2019

General Studies

Tashkent, Uzbekistan

- Cumulative GPA: 3.3/4.0

- General Studies: Algebra, Geometry, Calculus, Statistics, Physics, Chemistry, Foreign & Native Languages: English, Russian, Uzbek.

SKILLS

- **Programming Languages:** Rust, C/C++, Objective-C, Swift, Assembly, Nix, Bash, JavaScript, TypeScript, Python
- **Technologies:** NixOS, Any Imperative Linux Distros, Linux, FreeBSD, MacOS (Darwin), UNIX, LLVM, Git, Docker, Caddy, NGINX, Actix, Yew, React, Tailwind CSS
- **Development:** Operating Systems, Embedded, Kernel, Programming Language, Web
- **Activities:** Open Source, Community Development, Maintainership, Leading Development, Software Designing, Engineering
